NISHANTH RAJKUMAR

Data Engineer | Databricks Lakehouse • Unity Catalog • GCP • Azure | Data Platforms & CI/CD

Chennai, India | +91 99524 49729 | nishrk97@outlook.com | LinkedIn | GitHub

PROFESSIONAL PROFILE

Data Engineer with 4+ years of experience engineering production data platforms across Databricks, GCP, and Azure. Specialized in Databricks Lakehouse engineering, Unity Catalog automation, metadata-driven ingestion, CI/CD, and cloud-native integration. Experienced in converting manual platform processes into reusable engineering frameworks using Databricks Asset Bundles, Azure DevOps, Auto Loader, schema reconciliation, automated testing, and privacy-preserving AI.

SELECTED IMPACT

20×	140	78%	15 TB+
PGP runtime improvement 4 hours → 10 minutes	Automated tests CI/CD and catalog logic	Smaller pipeline definition 1,042 → 228 lines	Enterprise data environment experience

TECHNICAL EXPERTISE

Databricks & Data Platform
Databricks Lakehouse · Unity Catalog · Delta Lake · Asset Bundles · Auto Loader · Workflows · AI_CLASSIFY

Data Engineering
PySpark · Python · SQL · ETL/ELT · CDC · Medallion Architecture · Metadata-Driven Ingestion

Cloud
GCP · Azure · BigQuery · Cloud Run Jobs · Cloud Workflows · Azure Data Factory · Synapse

DevOps & Quality
Azure DevOps · Git · YAML · Infrastructure-as-Code · pytest · Service Principals · CI/CD

AI & Privacy
XLM-RoBERTa Large · Microsoft Presidio · GPU Inference · PII Masking

Integration & Analytics
C# · .NET Core · REST APIs · Power BI · KQL

PROFESSIONAL EXPERIENCE

ASHLEY GLOBAL CAPABILITY CENTER — Chennai, India

Data Engineer — **Dec 2024 – Present**

Databricks Platform & CI/CD

- Designed a four-stage Azure DevOps CI/CD framework using Databricks Asset Bundles and Infrastructure-as-Code to deploy notebooks, jobs, permissions, and configuration atomically across Dev, Stage, and Production, eliminating the separate Git-sync deployment dependency.
- Built a Python configuration generator with validation and environment portability; reusable YAML templates reduced the main pipeline definition from 1,042 to 228 lines.
- Engineered a Python/PySpark Unity Catalog reconciliation framework that compares version-controlled DDL with live schemas, automatically adds missing columns and applies safe type widening, and routes destructive or ambiguous changes through conditional review with categorized JSON drift artifacts.
- Created 140 automated pytest tests and enforced six DDL-governance rules in CI, remediating 40 tables, 20 routines, and two views for idempotent, environment-portable deployment.

Data Engineering, AI & Cloud

- Built six production Databricks Workflows and continue to support their operation across customer, sales, engagement, Talkdesk, LivePerson, and catalog-export domains using metadata-driven ingestion, watermark processing, and idempotent reprocessing.
- Implemented a near-real-time Sales Order flow from Azure Service Bus through parquet and Auto Loader into raw, staging, and processed Delta layers, scheduled every 15 minutes in Production.
- Built a GPU-accelerated PII-masking and interaction-classification pipeline using XLM-RoBERTa Large, Microsoft Presidio, and Databricks AI_CLASSIFY; investigated residual PII leaks and implemented a remediation pass for uncategorized transcripts.
- Re-engineered PGP processing with Google Cloud Workflows and Cloud Run Jobs, enabling parallel processing and reducing ZMP runtime from approximately four hours to ten minutes.

EARLIER EXPERIENCE

ASHVAD TECH PRIVATE LIMITED (FORMERLY ASHTBIT TECHNOLOGIES)

Lucknow, India

Data Engineer **Jul 2023 – Dec 2024**

- Built and maintained scalable ETL pipelines using Azure Data Factory and Azure Synapse Analytics.
- Developed .NET Web API solutions for enterprise data integration across applications and databases.
- Implemented Hangfire scheduling to automate ETL orchestration and reduce manual execution dependencies.
- Enhanced Power BI reporting and implemented migration to Entra-only authentication to strengthen access security and governance.

PROVANA

Bengaluru, India

Data Engineer **Jul 2022 – Jul 2023**

- Developed automated ETL pipelines using Azure Data Factory and Synapse Analytics to support business operations.
- Configured Logic Apps alerts for ETL failures and anomalies to support proactive operational response.
- Designed reusable ETL onboarding frameworks and used Kusto Query Language with Power BI for operational insights.

ACHIEVEMENTS & RECOGNITION

INNOVATION DELIVERY

11 proofs of concept · 14 innovation initiatives · 22 operational improvements

AWARDS

Dirty Fingernail Award (2025) · Above and Beyond Award of the Quarter (Q4 2025)

CREDENTIALS

Certifications

Microsoft Certified: Azure Data Scientist Associate

Recertified Nov 2025 · Valid through Nov 2026

DeepLearning.AI TensorFlow Developer Specialization

Education

Bachelor’s Degree in Computer Science

Karunya Institute of Technology and Sciences

Jul 2014 – Jun 2018
