PROFESSIONAL SUMMARY

Data Engineer with 4+ years of experience building production cloud data platforms, enterprise integrations, and deployment automation across Databricks, GCP, and Azure. Hands-on expertise in Databricks Lakehouse, Unity Catalog, Delta Lake, Azure DevOps, BigQuery, Python, SQL, and PySpark. Delivered metadata-driven ingestion, ETL/ELT, CDC, schema evolution, CI/CD, and applied AI solutions for enterprise data environments exceeding 15 TB. Strong focus on Infrastructure-as-Code, automated testing, data governance, privacy engineering, and converting manual processes into reusable, production-ready engineering frameworks.

TECHNICAL SKILLS

Databricks: Databricks Lakehouse, Unity Catalog, Delta Lake, Asset Bundles, Auto Loader, Workflows, AI_CLASSIFY, PySpark
Cloud Platforms: Google Cloud Platform, Microsoft Azure, Microsoft Fabric
GCP: BigQuery, Cloud Run Jobs, Cloud Workflows, Cloud Functions, Dataflow, Cloud Storage
Azure: Azure Data Factory, Synapse Analytics, Azure Functions, Logic Apps, Azure DevOps
Programming & Integration: Python, SQL, PySpark, C#, .NET Core, REST APIs, YAML, Bash, pytest
Data Engineering: ETL/ELT, CDC, metadata-driven ingestion, incremental loads, medallion architecture, schema reconciliation, data governance
DevOps & Analytics: Azure DevOps, Git, GitHub, Infrastructure-as-Code, YAML pipelines, service principals, pytest, Power BI, KQL

PROFESSIONAL EXPERIENCE

ASHLEY GLOBAL CAPABILITY CENTER | Chennai, India
Data Engineer | Dec 2024 – Present

- Designed a 4-stage Azure DevOps CI/CD framework using Databricks Asset Bundles and Infrastructure-as-Code to deploy notebooks, jobs, permissions, and configuration across Dev, Stage, and Production with service-principal authentication and approval gates.
- Built a Python configuration generator with naming validation, duplicate detection, notebook-existence checks, notification-roster merging, environment portability, and consistent job permissions; reusable YAML templates reduced the main pipeline from 1,042 to 228 lines.
- Engineered a Python/PySpark Unity Catalog DDL reconciliation framework that compares version-controlled DDL with live schemas, automatically applies safe evolution, and routes destructive or ambiguous changes through conditional review with categorized JSON drift artifacts.
- Created 140 automated pytest tests for bundle-generation and catalog-diff logic and enforced six DDL governance rules in CI; remediated 40 tables, 20 routines, and 2 views to comply with source-of-truth standards.
- Built and operated 6 production Databricks Workflows across customer, sales, engagement, Talkdesk, LivePerson, and catalog-export domains using a metadata-driven ingestion framework, watermark-based incremental processing, and idempotent reprocessing.
- Implemented a near-real-time Sales Order flow from Azure Service Bus through parquet and Databricks Auto Loader into raw, staging, and processed Delta layers, scheduled every 15 minutes in Production.
- Built a GPU-accelerated PII-masking and interaction-classification pipeline using XLM-RoBERTa Large, Microsoft Presidio, and Databricks AI_CLASSIFY; investigated residual leaks and added remediation for uncategorized transcripts.
- Re-engineered PGP processing with Google Cloud Workflows and Cloud Run Jobs, enabling parallel file processing and reducing ZMP runtime from approximately four hours to ten minutes.
- Authored platform documentation and AI-agent development rules covering naming, deployment, secrets, and catalog conventions, supporting consistent contributions with GitHub Copilot and Augment.

ASHVAD TECH PRIVATE LIMITED (FORMERLY ASHTBIT TECHNOLOGIES) | Lucknow, India
Data Engineer | Jul 2023 – Dec 2024

- Built and maintained scalable ETL pipelines using Azure Data Factory and Azure Synapse Analytics.
- Developed .NET Web API solutions for enterprise data-integration requirements across applications and databases.
- Implemented Hangfire scheduling to automate ETL orchestration and reduce manual execution dependencies.
- Enhanced Power BI dashboards to improve reporting accuracy and business visibility.
- Implemented migration to Entra-only authentication to strengthen database-access security and governance.

PROVANA | Bengaluru, India
Data Engineer | Jul 2022 – Jul 2023

- Developed automated ETL pipelines using Azure Data Factory and Synapse Analytics to support business operations.
- Configured Logic Apps alerts for ETL failures and anomalies to support proactive operational response.
- Designed reusable ETL onboarding frameworks to accelerate implementation for new clients and datasets.
- Used Kusto Query Language for log analytics and integrated operational insights into Power BI reporting.

SELECTED ACHIEVEMENTS

- Delivered an approximately 20x improvement in ZMP PGP processing, reducing runtime from about four hours to ten minutes through parallel cloud-native processing.
- Delivered 11 proofs of concept and 14 innovation initiatives and implemented 22 operational improvements.
- Introduced AI-assisted engineering practices reported to improve development productivity by 80%.
- Received the Dirty Fingernail Award in 2025 and the Above and Beyond Award of the Quarter for Q4 2025.

CERTIFICATIONS

- Microsoft Certified: Azure Data Scientist Associate | Recertified Nov 2025 | Valid through Nov 2026
- DeepLearning.AI TensorFlow Developer Specialization

EDUCATION

Bachelor’s Degree in Computer Science | Karunya Institute of Technology and Sciences | Jul 2014 – Jun 2018
